Adding IP and domain restrictions server role

Summary:

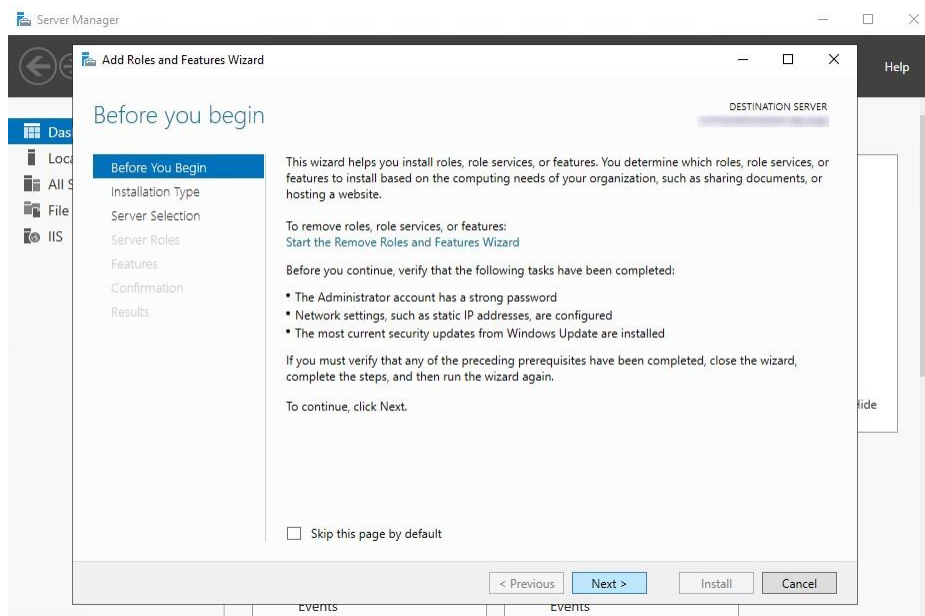

These instructions can be used to allow administrators the ability to limit access to the NotifyMDM administration dashboard to only those IP or IP ranges that are necessary for the administration of NotifyMDM. This will allow admins the ability to minimize the exposure to any content contained within the NotifyMDM administration dashboard.

***Note:** if the IP and Domain Restrictions server role has already been added, please skip to the next section ([here](#))

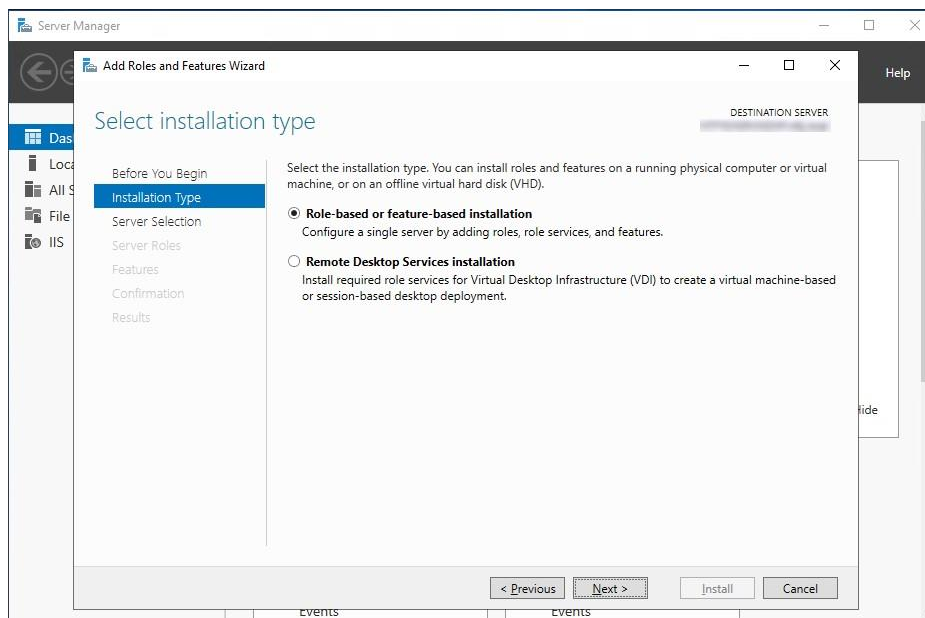

1. Open Server manager and access the Add Roles and Features option (**Manage > Access Roles and Features**)

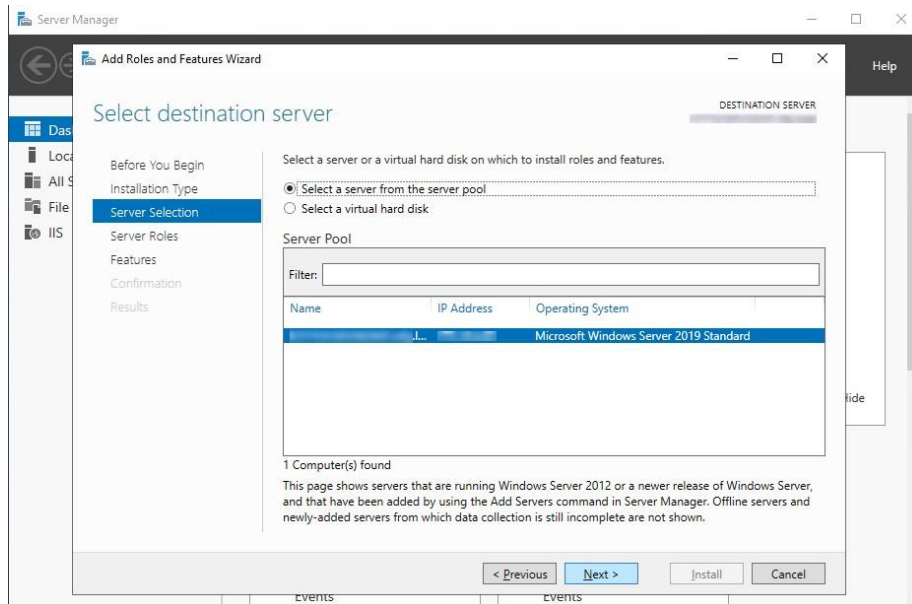

2. On the *Before you begin* screen, tap **Next**

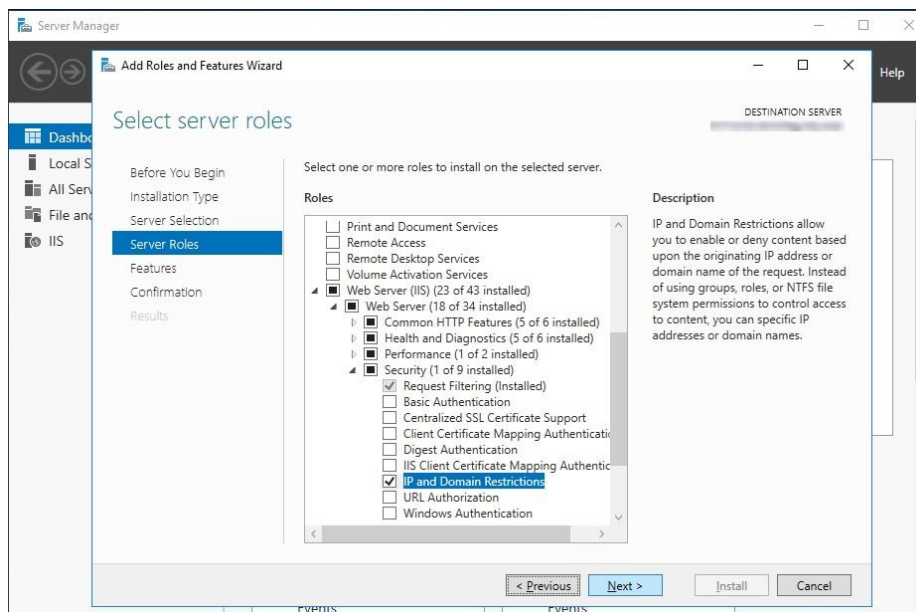

3. On the *Select installation type* screen, select **Role-based or feature-based installation**, and click **Next**

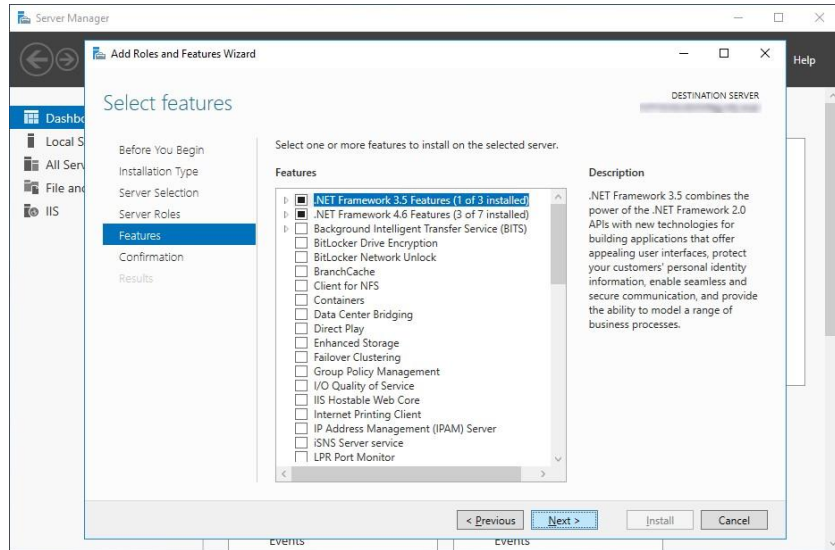

- On the *Select destination server* screen, please select the server hosting the NotifyMDM Server Web/HTTP component. If you are on the NotifyMDM Server Web/HTTP component, that should be the highlighted server. Please double check before proceeding. Highlight the NotifyMDM Server Web/HTTP component and click **Next**

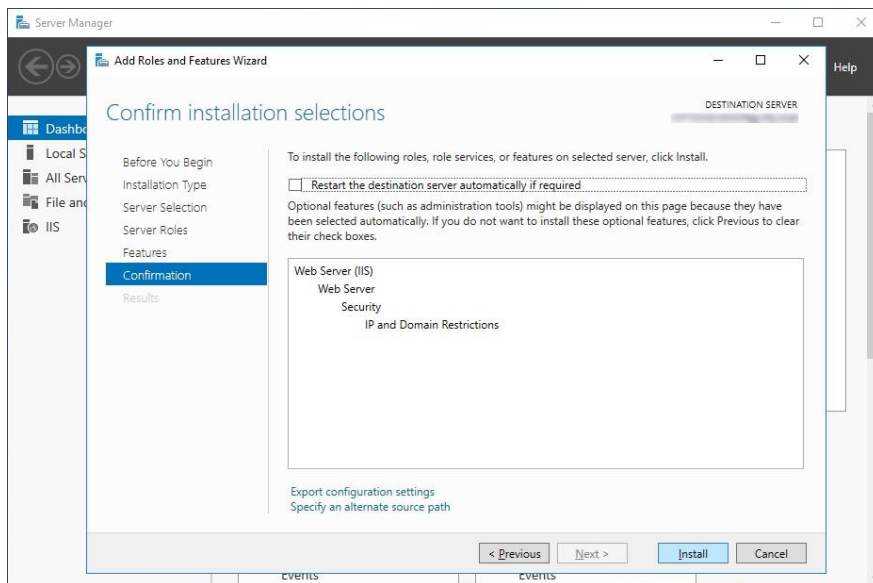

- On the *Server Select roles* screen, navigate to **IP and Domain Restrictions** (expand **Web Server (IIS)** > expand **Web Server** > expand **Security**). Now, checkmark the box to the left of **IP and Domain Restrictions** and click **Next**

6. No changes should be needed on *Select features* screen, just click **Next**

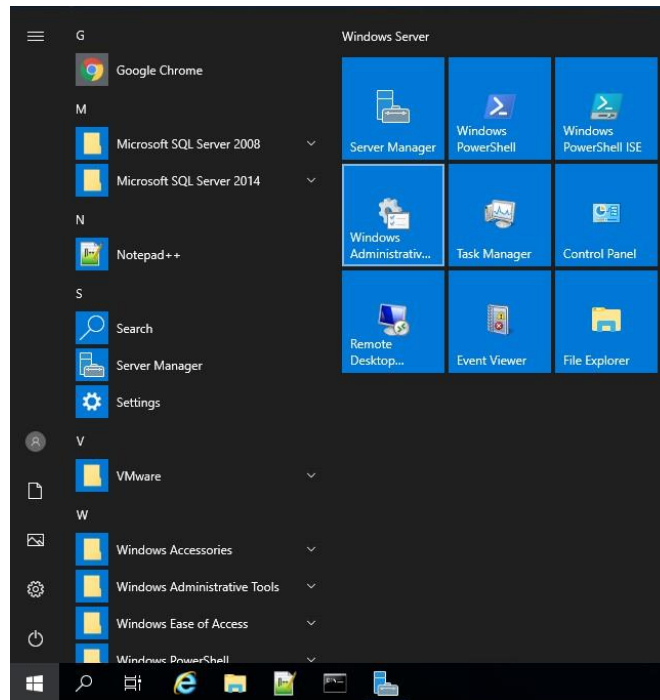

7. On the *Confirm installation selections* screen Verify that only the **IP and Domain Restrictions** server roles are being installed and then click **Install**.

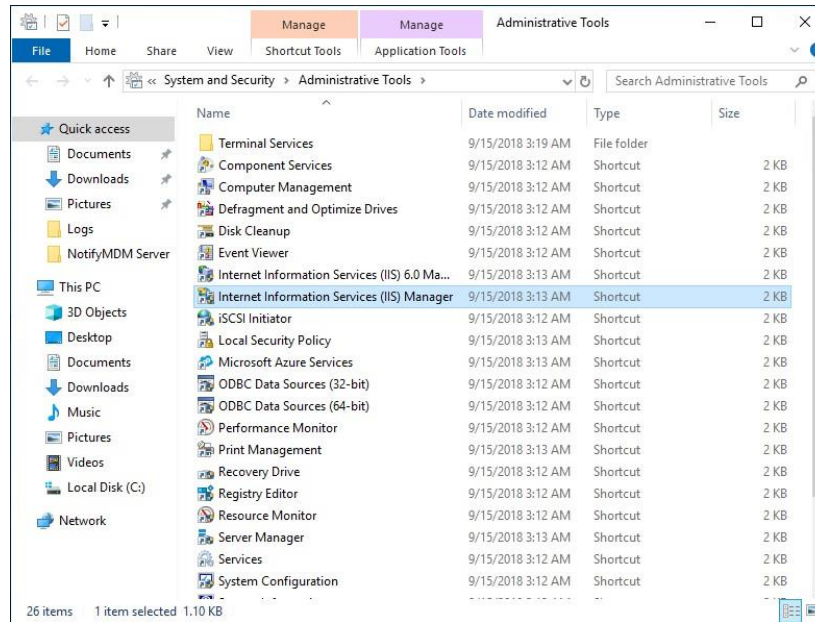

Once the **IP and Domain Restrictions** server role has been added/installed, the NotifyMDM dashboard can have IP addresses either whitelisted or blacklisted within Internet Information Services (IIS).

Setup or restrict access to the Dashboard IIS/virtual directory

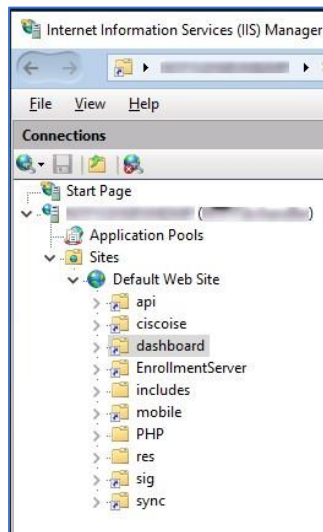

1. Please open the Windows Administrative Tools (**Start Menu > Windows Administrative Tools**)

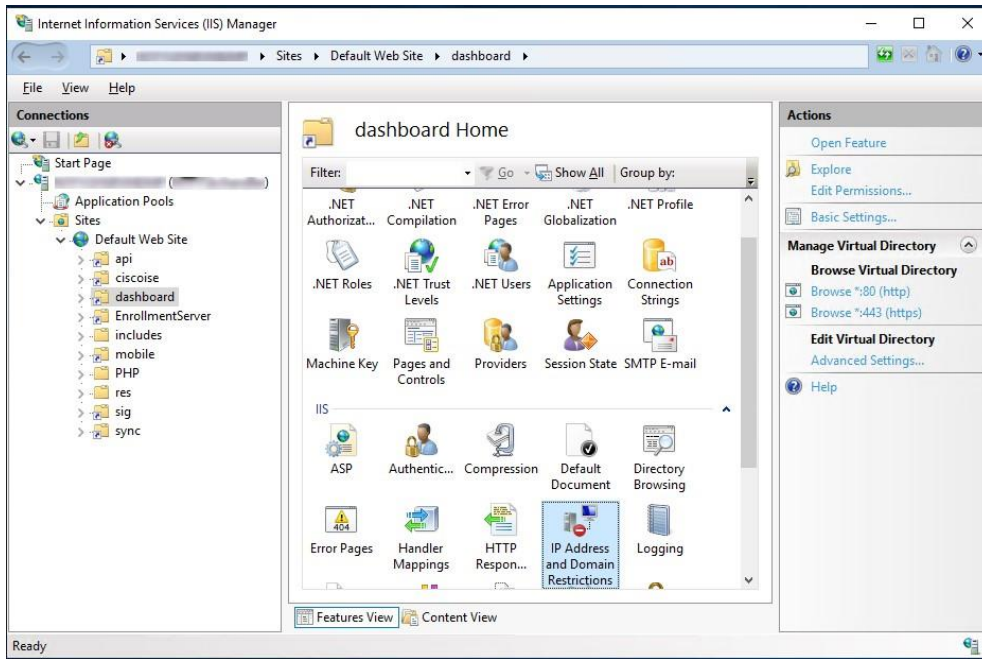

2. Please locate and double-click on **Internet Information Services (IIS) Manger**

3. Expand the server name listed. Now, expand the **Sites** folder. Please locate the NotifyMDM web site folder (by default installation, it will be labeled Default Web Site). Please expand that web site folder and click on the **dashboard** folder.

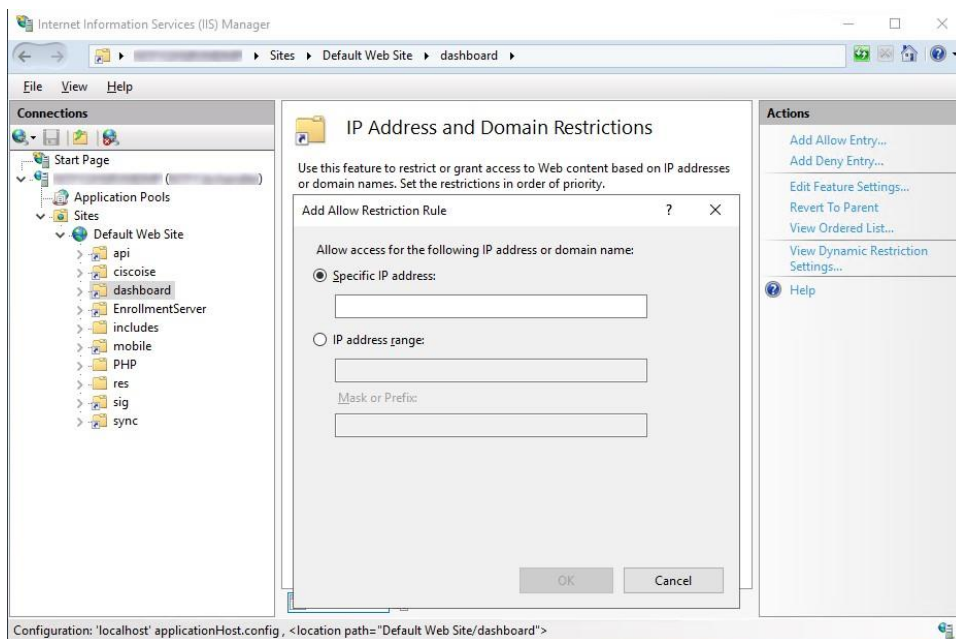

4. Within the dashboard Home area (center window), scroll to the **IIS section** and double-click on **IP and Domain Restrictions**

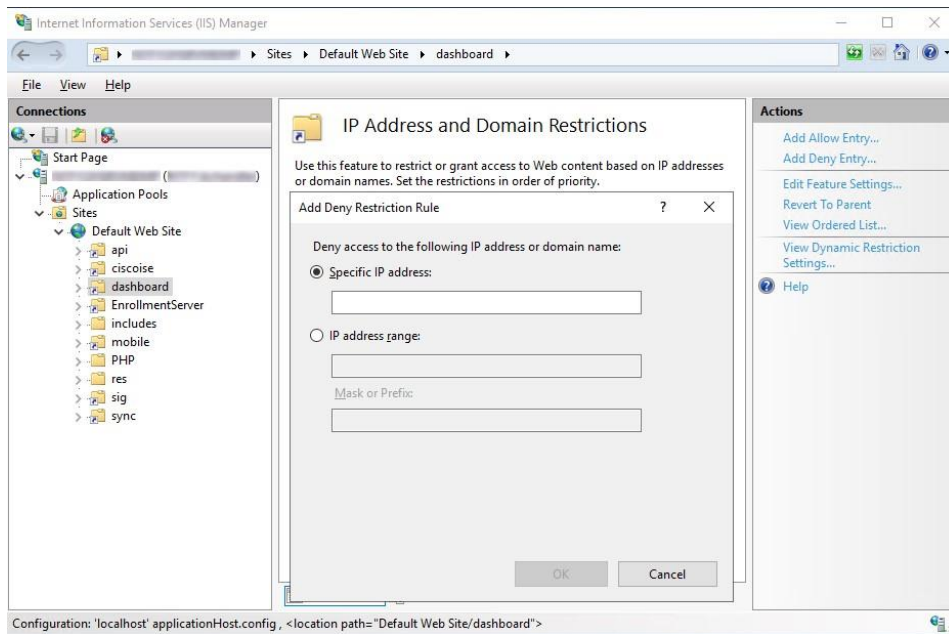

5. You can whitelist IP addresses (Add Allow Restriction Rule) or blacklisting IP addresses (Add Deny Restriction Rule) for access to the NotifyMDM dashboard.

6. Add Allow Restriction Rule (**Actions > Add Allow Entry**)

Add Deny Restriction Rule (**Actions** > **Add Deny Entry**)

Click **OK** when finished. Both Add Allow Restriction Rule and Add Deny Restriction Rule allow a specific IP address, a range of IP addresses.
